

**Do you have an irrigation system?**

**Keep your drinking water safe through good maintenance.**

## Check your Irrigation System for Cross Connections

- A **cross connection** is a connection between **potable water** (safe for human consumption) and **non-potable water** (not safe for human consumption).
- **Lawn irrigation systems can backflow** contaminated water into your drinking water.
- **Install and register appropriate backflow preventers** in your system to prevent this – *we can help!*

## Maintain your Irrigation System & Re-Set your timer

- **Switch your automatic irrigation to the new overnight lawn watering time.** Set your system to start at times other than the top of the hour, between 12:01 am and 10 am.
- Increased water demands during morning peak watering times impact flow, pressure and water quality, affecting our water supply system.

Help protect our water supply by having the proper systems in place, to ensure water remains clean right to your tap. Learn more at [crd.bc.ca/water](http://crd.bc.ca/water)
